

PROJECT DESIGN PHASE 1

SOLUTION ARCHITECTURE

DATE	02 Nov 2023
TEAM ID	2DE609BEACAAFDA93DC492429FF2BCB3
PROJECT NAME	Pizza Delivery App

SOLUTION ARCHITECTURE :

The solution architecture for a pizza delivery app is a complex yet well-structured system that encompasses various layers of technology to provide a seamless and secure user experience. On the client-side, the mobile app interface enables users to browse the menu, customize orders, and track deliveries. Meanwhile, the server-side backend handles critical components like order and menu management, user profiles, and payment processing. Databases store essential data, while external integrations ensure reliable services such as geolocation and notifications. The app may also connect with third-party APIs for mapping and marketing purposes. Cloud infrastructure, such as AWS or Azure, provides scalability and resilience.
